

On the IMS page, I did not find any cookies. A screenshot of the same has been attached herewith. This may be because this particular page does not need to store any information from the user who is currently visiting this page. The scenario would be different when we go to student login since there we would have some data specific to every student that needs to be remembered when the student visits the page next time.

On the student portal page, I found a RequestToken cookie. Its priority, size, domain, and other details are present in the screenshot. This is associated with signed credentials.
